GOVERNMENT COLLEGE OF ENGINEERING ERODE – 638 316

RECORD NOTE BOOK

Register Number:

Certified that this is the bonafide record of work done by Selvan/Selvi ____________________________________of **Sixth** Semester **B.E. Computer Science and Engineering** branch during the academic year **2025 - 2026** in the **CCS356–Object Oriented Software Engineering** Laboratory.

Staff Incharge | Head of the Department

Submitted for the university practical examination on _________________

at Government College of Engineering, Erode

Date:________________

Internal Examiner | External Examiner

INDEX

EX NO: 1 **PASSPORT AUTOMATION SYSTEM**

AIM:

To develop the Passport Automation System using Star UML and Python.

PROGRAM ANALYSIS AND PROJECT PLAN:

To simplify the process of applying passport, software has been created by designing through star UML, using HTML as a front end and python as a back end. Initially the applicant login the passport automation system and submits his details. These details are stored in the database and verification process done by the passport administrator, regional administrator and police and issue the passport.

PROBLEM STATEMENT:

1. Passport Automation System is used in the effective dispatch of passport to all ofthe applicants. This system adopts a comprehensive approach to minimize the manual workand schedule resources, time in a cogent manner.

2. The core of the system is to get the online registration form (with details such as name, address etc.,) filled by the applicant whose testament is verified for its genuineness by the Passport Automation System with respect to the already existing information in the database.

3. This forms the first and foremost step in the processing of passport application. After the first round of verification done by the system, the information is in turn forwarded to the regional administrator's (Ministry of External Affairs) office.

4. The system forwards the necessary details to the police for its separate verification whose report is then presented to the administrator. After all the necessary criteria have been met, the original information is added to the database.

SOFTWARE REQUIREMENT SPECIFICATION:

1. INTRODUCTION:

Passport Automation System is an interface between the Applicant and the Authority responsible for the Issue of Passport. It aims at improving the efficiency in the Issue of Passport and reduces the complexities involved in it to the maximum possible extent.

2. PURPOSE:

If the entire process of 'Issue of Passport' is done in a manual manner then it would take several months for the passport to reach the applicant. Considering the fact that the number of applicants for passport is increasing every year, an Automated System becomes essential to meet the demand. So, this system uses several programming and database techniques to elucidate the work involved in this process. As this is a matter of National Security, the system has been carefully verified and validated in order to satisfy it.

3. SCOPE:

The System provides an online interface to the user where they can fill in their personal details. The authority concerned with the issue of passport can use this system to reduce his workload and process the application in a speedy manner. Provide a communication platform between the applicant and the administrator Transfer of data between the Passport Issuing Authority and the Local Police for verification of applicant's information.

4. DEFINITIONS, ACRONYMS AND THE ABBREVIATIONS:

1. Administrator- Refers to the super user who is the Central Authority who has been vested with the privilege to manage the entire system. It can be any higher official in the Regional Passport Office of Ministry of External Affairs.

2. Applicant - One who wishes to obtain the Passport.

3. PAS - Refers to this Passport Automation System.

5. TECHNOLOGIES USED:

- HTML
- CSS
- PYTHON

TOOLS USED:

STARUML(for developing pattern).

6. OVERVIEW:

SRS includes two sections overall description and specific requirements Overall description will describe major role of the system components and interconnections. Specific requirements will describe roles & functions of the actors.

7. PRODUCT PERSPECTIVE:

The PAS acts as an interface between the 'applicant' and the 'administrator'. This system tries to make the interface as simple as possible and at the same time not risking the security of data stored in. This minimizes the time duration in which the user receives the passport.

8. SOFTWARE INTERFACE:

1. **Front End Client** – HTML, CSS.

2. **Back End** – Python using flask.

3. **Design Tool**-Star UML (for developing UML Patterns).

9. HARDWARE INTERFACE:

The server is directly connected to the client systems. The client systems have access to the database in the server.

10. SYSTEM FUNCTIONS:

1. Secure Registration of information by the Applicants.

2. Message box for Passport Application Status Display by the Administrator.

3. Administrator can generate reports from the information and is the only authorized personnel to add the eligible application information to the database.

11. USER CHARACTERISTICS:

1. Applicant - They are the people who desires to obtain the passport and submit the information to the database.

2. Administrator - He has the certain privileges to add the passport status and to approve the issue of passport. He may contain a group of persons under him to verify the documents and give suggestion whether or not to approve the dispatch of passport.

3. Police - He is the person who upon receiving intimation from the PAS, perform a personal verification of the applicant and see if he has any criminal case against him before or at present. He has been vetoed with the power to decline an application by suggesting it to the Administrator if he finds any discrepancy with the applicant.

12. CONSTRAINTS:

1. The applicants require a computer to submit their information.

2. Although the security is given high importance, there is always a chance of intrusion in the web world which requires constant monitoring.

3. The user to be careful while submitting the information. Much care is required.

13. ASSUMPTIONS AND DEPENDENCIES:

1. The Applicants and Administrator must have basic knowledge of computers and English Language.

2. The applicants may be required to scan the documents and send.

14. REFERENCES:

For **further** reference, refer the following books

1. Applying UML and patterns

2. An introduction to Object Oriented Analysis and Design and Iterative Development.

RESULT:

Thus, the Passport Automation System using StarUML has been designed and implemented successfully.

EX NO: 2 EXAM REGISTRATION SYSTEM

AIM:

To design and develop Exam Registration System using Star UML Modelling and implemented using Python-Flask-SQL with front-end languages like HTML, CSS, JS for better user experience.

PROBLEM ANALYSIS AND PROJECT PLANNING:

The Exam Registration System is an web application in which applicant can register themselves for the examinations available. The details of the students who have registered for examinations will be stored in database and maintained. The Hall Ticket is generated for the exams registered by the students and issued.

PROBLEM STATEMENT:

The process of students accessing the registration application and applying for the examinations of their interest is to be provided and hall tickets for respective examinations is to be generated and issued through the following steps.,

- The students have to sign up and create an account for themselves.
- The students have to login using their email and password
- The students can view all examinations provided and view the particular exams of their interest.
- They can register exams of their choice.
- After registering exams, they can download Hall Tickets.

SOFTWARE REQUIREMENT SPECIFICATION:

1. **INTRODUCTION:**

The Exam Registration is a web application in which applicant can register themselves for exams from their home using a computer or an android mobile with an internet connection. The details of students who have registered exams are stored in a database and will be maintained. The database is then used for issuing hall tickets.

1.1 PURPOSE:

The purpose of this application is to make easy the registration process for the students and maintain the registration details in an effective way.

1.2 DOCUMENT CONVENTIONS:

This document was created based on IEEE template for System Requirement Specifications document.

1.3 INTENDED AUDIENCE AND READING SUGGESTION:

The Actors involved are the Students and Exam Controllers.

1.4 PRODUCT SCOPE:

The scope of this web application is to provide an easy interface to the applicants where they can fill the details and examiners could post examinations and to maintain all those data in an easy and effective way.

2. OVERALL DESCRIPTION:

2.1 PRODUCT PERSPECTIVE:

This system acts as an interface between the 'Student' and 'Exam Controller'. This system makes an interface as simple and decorative as possible and at the same time not risking the security of data stored.

2.2 PRODUCT FUNCTIONS:

Secure registration of information of the students providing privacy. SMS and Mail updates to the students will be given by the Exam Controller.

2.3 USER CLASSES AND CHARACTERISTICS:

Student: They are the people who desire to register for exam by providing their information.

Exam Controller: They post exams and can remove posted exams.

2.4 OPERATING ENVIRONMENT:

This application can be run on Operating Systems like Windows XP, 7, 8, 10, Linux, Unix, OSX, Raspberry Pi etc., connected to an internet.

2.5 DESIGN AND IMPLEMENTATION CONSTRAINTS:

This system requires a computer or a mobile phone connected with internet to submit information.

2.6 USER DOCUMENTATION:

The documentation helps user to operate the system with detailed information regarding the User Interface.

2.7 ASSUMPTION AND DEPENDENCIES:

The student and exam controller must have a basic knowledge of computer and English language. The student must have to print the downloaded hall ticket.

3. EXTERNAL INTERFACE REQUIREMENTS:

3.1 USER INTERFACE:

The user interface is displayed in a web browser using HTML, CSS-Bootstrap.

3.2 HARDWARE INTERFACE:

Screen Resolution of at least 400x300 is required and the system must have to be connected to internet.

3.3 SOFTWARE INTERFACE:

PLATFORM: Windows XP, 7, 8, 10, Linux, OSX
FRONT-END: HTML, CSS + Bootstrap, JavaScript
BACK-END: Python + Flask Framework (MVC Pattern)
TOOLS: PyCharm, Visual Studio Code
DATABASE: MSSQL

3.4 COMMUNICATIONAL INTERFACES:

Web Browser is used as communicational interface for communicating with web application running on a server.

4. SYSTEM FEATURES:

4.1 GRAPH VISUALIZATION:

Graphs can be used to visualize number of students registered for the different examinations offered.

4.2 GRAPH LAYOUT:

Various Layouts can be provided to the graphs.

4.3 GRAPH METRICS:

The various graph metrics must be included for each and every graph.

4.4 FILTERS:

It is also type of query that can be used to filter the graph representation.

4.5 DATA TABLE:

The data table may include the details about the number of students and their registered exam courses.

4.6 DYNAMIC GRAPH:

Pictorial representation cannot be done.

4.7 GRAPH EXPORT:

The employed graph can be exported anywhere.

5. OTHER NON-FUNCTIONAL REQUIREMENTS:

5.1 PERFORMANCE REQUIREMENT:

The database must be able to accommodate at least 10,000 users and support multiple users at a time.

5.2 SAFETY REQUIREMENT:

The database may crash due to Virus or System failure. So backup must be made to prevent such losses.

5.3 SECURITY:

Protect the software from accidental or malicious access and keep specific log or history sets.

5.4 SOFTWARE QUALITY ATTRIBUTES:

The software created is Accurate, Reliable, Secured, Fast and Compatible.

6. SAMPLE SCENARIOS:

The sample details are provided to the system to check whether the system is working properly or not. The two test cases are

Case 1: Perfect details are given.

Case 2: Invalid details are provided to check whether the system terminates the process.

EX.NO:3 STOCK MAINTENANCE SYSTEM

AIM:

To develop a project stock maintenance system using StarUML and to implement the software in Java.

PROBLEM ANALYSIS AND PROJECT PLANNING:

The Stock Maintenance System, initial requirement to develop the project about the mechanism of the Stock Maintenance System is caught from the customer. The requirement are analyzed and refined which enables the end users to efficiently use Stock Maintenance System. The complete project is developed after the whole project analysis explaining about the scope and the project statement is prepared.

PROBLEM STATEMENT:

The process of stock maintenance system is described sequentially through steps

a. The customer purchases the product.
b. The vendor fills the customer details.
c. The vendor completes the sale and updates the stock.
d. The vendor informs the stock person if stock is low.
e. The supplier person refills the stock.
f. The vendor makes payment for the refilled stock.

SOFTWARE REQUIREMENT SPECIFICATION:

1. INTRODUCTION:

1.1 PURPOSE:

The purpose of stock maintenance system is to maintain the stock in a precise manner.

1.2. DOCUMENT CONVENTIONS:

Created on basis of IEEE template for System Requirement Specification Documents.

1.3 INTENDED AUDIENCE AND READING SUGGESTIONS:

This document is intended to be read by the developers and the end users.

1.4. PRODUCT SCOPE:

The scope of this stock maintenance system is to maintain the stock details after the purchase and restocking from the supplier

2. OVERALL DESCRIPTION:

2.1. PRODUCT PRERSPECTIVE:

This Project makes purchase easier and makes comfortable for the customer.

2.2. PRODUCT FEATURE:

The front end requires details for buying products and back end for making payment storing sale information.

2.3. USER CLASSES AND CHARACTERISTICS:

The stock maintenance system is used by the customers to make purchase that are available in online market and does the payment.The customer account has to be updated each time the customer makes a purchase.

2.4. OPERATING ENVIRONMENT:

This tool will run on Microsoft Windows based operating system.

2.5. DESIGN AND IMPLEMENTATION CONSTRAINTS:

This will be an open source project and thus will not be able to operate and function on most property operating system due to lack of support system provided by the system.

2.6. USER DOCUMENTATION:

The user documentation can be found in this SRS.

2.7. ASSUMPTION AND DEPENDENCIES:

We assume the extra documentation beyond this SRS would not be necessary in order for the user to utilize this project.

3. EXTERNAL INTERFACE REQUIREMENT:

3.1. USER INTERFACE:

This tool will come along with a basic user interface tool with GUI alone with simple and easy to navigate icons thus avoiding any complexity for novice user.

3.2. HARDWARE INTERFACE:

The basic requirements are Intel Pentium IV 1.83 with memory 256 MB RAM and hard disk drive 40 GB.

3.3. SOFTWARE INTERFACE:

The Software used in this project are listed below:

1. Front End-Java.
2. Back End-MySQL Database.

And also, Star-UML is used to design diagrams in this project.

4. SYSTEM INTERFACE:

4.1. GRAPH VISUALIZATION:

Graph can include number of customers registered or new customers to be registered.

4.2. GRAPH LAYOUT:

Various layout for products in the system.

4.3. GRAPH METRICS:

The graph metrics are detailed here.

4.4. FILTERS:

Various filters can be applied to the graph determined.

4.5. DATA TABLE:

The table include Customer Name, Customer ID and Purchase details, etc.

4.6. DYNAMIC GRAPH:

Pictorial representation can't be done.

4.7. GRAPH EXPORT:

The graph can be exported if necessary.

5. OTHER NON-FUNCTIONAL REQUIREMENT:

5.1. PERFORMANCE REQUIREMENT:

The network should be maintained effectively during purchase the transaction for good maintenance of the system.

5.2. SAFETY REQUIREMENT:

The Stock person must update record of the customer to prevent fraudulent actions and other errors that may occur during purchase.

5.3. SECURITY REQUIREMENT:

The customer must not give details to others about the purchase details and payment.

5.4. SOFTWARE QUALITY ATTRIBUTES:

The code will be free to in its accuracy, reusability to modify the code, flexibility in its usage and more over simple and informative.

5.5. BUSINESS RULE:

There are no such business rules. This tool can be used by any vendors.

EX NO: 4 ONLINE COURSE RESERVATION SYSTEM

AIM:

To create a system through which students can register to the courses desired by them.

PROBLEM ANALYSIS AND PROJECT PLAN:

To simplify the process of reserving the course, software has been created by designing through rational Star UML, using Html, CSS, Java Script, JQuery as a front end java, Java Servlet, Postgresql as a backend. Initially the applicant logins the course reservation system and submits his details. These details are stored in the database and verification process done by the registrar and the course is reserved as per the wish of the applicant.

PROBLEM STATEMENT:

The system is built to be used by students and managed by an administrator.

The student and employee have to login to the system before any processing can be done.

The student can see the courses available to him/her and register to the course he/she wants.

The administrator can maintain the course details and view all the students who have registered to any course.

INTRODUCTION:

Course Reservation System is an interface between the Student and the Registrar responsible for the issue of Course. It aims at improving the efficiency in the issue of Course and reduces the complexities involved in it to the maximum possible extent.

PURPOSE:

If the entire process of 'Issue of Course' is done in a manual manner then it would several months for the course to reach the applicant. Considering the fact the number of applicants for course is increasing every year, an Automated System essential to meet the demand. So this system uses several programming and database techniques to elucidate work involved in this process.

SCOPE:

The System provides an online interface to the user where they can fill in their personal details and submit the necessary documents (may be by scanning).

The Registrar concerned with the issue of course can use this system to reduce his workload and process the application in a speedy manner.

Provide a communication platform between the Student and the Registrar.

DEFINITIONS, ACRONYMS AND THE ABBREVIATIONS:

REGISTRAR

Refers to the super user with the privilege to manage the entire system.

APPLICANT

One who wishes to register the Course

OCRS

Refers to online Course Reservation System.

HTML

Markup Language used for creating web pages.

HTTP

Hyper Text Transfer Protocol.

TCP/IP

Transmission Control Protocol/Internet Protocol is the communication protocol used to connect hosts on the Internet.

TECHNOLOGIES TO BE USED:

HTML

JAVASCRIPT

JAVA

JQUERY

TOOLS TO BE USED:

Star UML Patterns

ECLIPSE IDE

OVERVIEW:

SRS includes two sections overall description and specific requirements .Overall description will describe major role of the system components and interconnections. Specific requirements will describe roles & functions of the actors.

OVERALL DESCRIPTION:

The PAS acts as an interface between the 'applicant' and the 'registrar' This system tries to make the interface as simple as possible and athe same time not risking the security of data stored in.

SOFTWARE INTERFACE:

• Front End Client - The applicant and registrar online interface is built using HTML ,CSS ,JAVASCRIPT,JQUERY.

• POSTGRESQL access database.

HARDWARE INTERFACE:

The server is directly connected to the client systems. The client systems have access to the database in the server.

SYSTEM FUNCTIONS:

Secure Reservation of information by the Students.

SMS and Mail updates to the students by the Registrar

Registrar can generate reports from the information and is the only authorized personnel to add the eligible application information to the database.

USER CHARACTERISTICS:

• Applicant - They are the people who desires to obtain the course and submit the information to the database.

•Administrator - He has the certain privileges to add the course status and to approve the issue of course.

CONSTRAINTS:

- The applicants require a computer to submit their information.
- Although the security is given high importance, there is always a chance of intrusion in the web world which requires constant monitoring.
- The user has to be careful while submitting the information. Much care is required.

ASSUMPTIONS AND DEPENDENCIES:

- The Applicants and Administrator must have basic knowledge of computers and English Language.
- The applicants may be required to scan the documents and send

RESULT:

Thus the project for Course Reservation system has been successfully developed.

EX NO: 5 **E-Ticketing**

AIM:

To develop the E-Ticketing System using Star UML and to implement software in PyCharm

PROBLEM STATEMENT:

For the E-ticketing system the new passenger has to register himself to the system. If the passenger is already registered then he can simply log in to the system. His login is validated by the system. The passenger searches for the availability of the required seat. If the seat is available then he fills up the form, submits it and then books the ticket. The passenger makes the online payment. Only after validation of the payment the ticket can be issued to the passenger. The E-ticket can be sent to the passenger via Email. The passenger can then take the print-out of the ticket.

SRS DOCUMENT:

1. INTRODUCTION:

1.1 Purpose:

The passenger wants to login the database for reserve the ticket. In the specification use define about the system requirements that are part from the functionality of the system. It tells the usability, reliability defined in the use case specification.

1.2 Scope:

The system provides an online interface to the user where they can fill their personal details and submit the necessary documents .The authority concerned with the issue of railway can use this system to reduce his workload and process the application in a speedy manner. It provides a communication platform between the passenger and the administrator.

1.3 Tools: Star UML (for developing UML Patterns)

Frontend: HTML, CSS, JavaScript

Backend: Python

Tool: PyCharm

Platform: Windows, UNIX

Database: Sqlite(Sqlalchemy)(Using ORM)

1.4 Overview:

SRS includes two sections overall description and specific requirements - Overall description will describe major role of the system components and interconnections. Specific requirements will describe roles & functions of the actors.

2. FUNCTIONALITY:

The database should be act as a main role of the E-ticketing system it can be booking the ticket in easy way.

3. USABILITY:

The User interface makes the Net banking/Credit card/Debit card System to be efficient.

4. RELIABILTY:

The system should be able to process the user for their corresponding request.

5. SPECIFIC REQUIREMENTS:

The specific requirement for this system is to validate the account details given by the passenger then only issues the ticket.

6. PROTOTYPE:

The details are given by passenger and store the database. Passenger pays the amount and tickets are issued to the passenger.

7. HOW TO RUN PROTOTYPE:

After filling the data, submit the form. After submission the details are checked and also checked the train in database then issue the ticket.

8. PERFORMANCE AND REQUIREMENTS:

• Many passengers can access the system simultaneously.

• There are no limitations for registration as many as passenger can register.

• The confirmation message sends to the respective passenger mails or phone number.

9. INTERFACE:

9.1. SOFTWARE INTERFACE:

The Software used in this project are listed below:

PyCharm

And also Star-UML is used to design diagrams in this project.

9.2. HARDWARE INTERFACE:

The server is directly connected to the client systems. The client system has access to the database in the server.

10. CONSTRAINTS:

The passenger require a computer to submit their Detail .Although the security is given high importance ,there is always a chance of intrusion in the web world which requires constant monitoring.

11. APPORTIONING OF REQIUREMENT:

Based on negotiations with customers, requirement that are determined to be beyond the scope of the current project and may be addressed in future versions/releases.

12. SPECIFIC REQUIREMENT:

The top level requirement in this project is booking the ticket without any problem is the major requirement.

13. SAMPLE SCENARIOS:

Use real data and problem scenarios and also include screen captures illustrating what our prototype produces. As always be sure to describe.

14. REFERENCES

For further reference, refer the following books

RESULT:

Thus the E-Ticketing System has been analyzed, designed and implemented successfully.

EX NO: 6 CREDIT CARD PROCESSING SYSTEM

AIM:

To develop a project credit card system using the STARUML software from the UML diagram and to implement the software in PYTHON.

PROBLEM ANALYSIS AND PROJECT PLANNING:

The Credit Card Processing System which is use to purchasing an item from any shopping mall, and it used to maintain the limitation of credit card balance and current transaction item process could be update via credit card machine. This project mainly used for large amount of can be easy to buy from anywhere and required transaction process should be maintained by them.

PROBLEM STATEMENT:

The customer should select the item to be purchase from the shop by using credit card payment then the vendor should give a bill for the selected item. The customer should give his card to swap and request for the kind of amount transaction. After processing the transaction, the Credit Card Machine should give the balance print statement or receipt.

- Customer should select the item from the shop.
- Vendor makes the bill for the selected item.
- Customer gives the credit card to the vendor to swap the card.
- They required amount transaction is done by the card reader.
- Vendor will issue the balance statement to the customer.
- Customer put the signature in the receipt and returns to the vendor.

SOFTWARE RECUIREMENT SPECIFICATION:

1. INTRODUCTION:

A credit card is a small plastic card issued to user as a system of payment. It allows its holder to buy goods and services on the holder's promise to pay for these goods and services. The issuer of the card creates to the consumer from which the line of credit to the costumer from which the user can borrow money for payment to a merchant or as a cash advance to the user.

The merchant then re-enters the transaction via the gateway processor, the data is logged and the debit is transferred to the account.

The two purchase options for credit card processing facility are

- Validation only
- Credit card processing

2. PURPOSE:

When the customer completes their shopping cart, their credit card is preauthorized and the order is entered into sales order. Credit card processing dials out and obtains a credit card payment, within five minutes the customer receives an email receipt.

3. SCOPE:

• Automatically connects to your financial network for credit card authorizations and settlements.

• Integrates with sales order, Accounts Receivable and e-Business Manager.

• Support for dial-up (modem) connections or secure internet connections through TCP/IP and SSL.

• Complaint with visa and master card Electronic Commerce Indicator (ECI) regulations.

• Multiple address verification options available.

4. DEFINITIONS, ACRONYMS AND THE ABBREVIATIONS:

• Authorization service - The issuer of the card creates a resolving account and grants a line of credit to the consumer from which the user can borrow money for payment to a merchant or as a cash advance to the user.

• User – One who wishes to uses the credit card.

• CCP- Refer to this the credit card processing.

5. REFERENCES:

For further reference refer the following books

1. Applying UML and patterns
2. An Introduction to Object Oriented Analysis and Design and Iterative Development.

6. TECHNOLOGIES USED:

*HTML

*CSS

*PYTHON

7. TOOLS USED:

• STARUML

8. OVERVIEW

SRS includes two sections overall description and specific requirements overall description will describe major role of the system components and inter-connected specific requirements will describe roles & functions of the actors.

8. OVERALL DESCRIPTION:

a. PRODUCT DESCRIPTION:

This solution involves signing up for a free business account. Once this done and the ecommerce site is properly configured, you can accept payments from visa, master card, Amex and discover cards payments.

10. SOFTWARE INTERFACE:

• Front end: - The applicant and Administrator interface is built using HTML and CSS

• Design tool: - STARUML.

• Back End: -Python using flask

11. HARDWARE INTERFACE:

The server is directly connected to the client systems. The client systems have access
to the database in the server.

12. SYSTEM FUNCTIONS:

• Accept credit card numbers on the web, store them in a database, then process them offline.

• Credit card processing with CCP.

• Credit card processing with a third-party credit card processing company.

13. USER CHARACTERISTICS:

• User/Customer: They are the people who desire to purchase the goods using credit card.

• Authorization Service: Validate the credit card payments to ensure that the card number is valid and the card has no expired.

▪ Deposit processing to apply the deposit payment to the card.

▪ Prepare credit card transaction reports that show authorization codes amount and error/success messages.

14. CONSTRAINTS:

• Trusted if using a well-known third-party processor.

• Must suite for higher-volume sites.

• Cheaper transaction rates.

• Getting money transferred may be very fast.

• Must provide fraud prevention measures and fraud protection programs.

15. ASSUMPTIONS AND DEPENDECIES:

- The applicants and Administrator must have basic knowledge of computers and English language.
- The Applicants may be required seen the document and send.

FORM 10:

RESULT:

Thus, project for Credit Card Processing system was designed and implemented successfully and tested with valid inputs.

EX NO:7 RECRUITMENT MANAGEMENT SYSTEM

AIM:

To create an automated system to perform the Recruitment Management System Process.

(I)PROBLEM STATEMENT:

The recruitment system allows the job seekers to view the job opportunity through Advertisement and helps to apply for the job. The organization shortlist the applicants for the interview. The shortlisted applicants undergo through a process of Test and Interview. The HR department selects the Applicant based on the performance in the Test and Interview. Finally the recruited applicants are informed. This system makes the task of the job seeker easier rather than waiting in queue for enrollment. This also reduces the time consumption for both for the job seeker and organization.

(II)SOFTWARE REQUIREMENT SPECIFICATION:

1.0 INTRODUCTION:

Recruitment System is an interface between the Applicant and the Organization responsible for the Recruitment. It aims at improving the efficiency in the Recruitment process and reduces the complexities involved in it to the maximum possible extent.

1.1 PURPOSE:

If the entire process of ‘Recruitment' is done in a manual manner then it would takes several days for the recruitment. Considering the fact that the number of applicants for recruitment is increasing every year, an Automated System becomes essential to meet the demand. So this system uses several programming and database techniques to elucidate the work involved in this process.

1.2 SCOPE:

- The System provides an interface to the user where they can fill in their personal details and apply for the job.

- The Organization (HR-Department) concerned with the recruitment process can make use of this system to reduce their workload and process the application in a speedy manner.

- Provide a communication platform between the Applicant and the Organization.

1.3 DEFINITIONS, ACRONYMS AND THE ABBREVIATIONS:

- **Organization:**

Refers to the super user who is the Central Authority with the privilege to manage the entire system. It can be any higher official in the HR department.

- **Applicant:**

One who wishes to apply for the job.

- **RS:**

Refers to this Recruitment System.

- **JAVA:**

JAVA Language used for creating System application.

- **NETBEANS:**

NETBEANS is a programming platform java platform for developing and running distributed java applications.

1.4 REFERENCES:

IEEE Software Requirement Specification format.

1.5TECHNOLOGY TO BE USED:

- JAVA
- Wamp Server
- Mysql

1.6TOOLS TO BE USED:

- Netbeans IDE (Integrated Development Environment)
- Star UML tool (for developing UML Patterns)

1.7 OVERVIEW:

SRS includes two sections overall description and specific requirements

Overall Description will describe major role of the system components and inter-connections.

Specific Requirements will describe roles & functions of the actors.

2.0 OVERALL DESCRIPTION:

2.1 PRODUCT PERSPECTIVE:

The RS acts as an interface between the "Applicant and the 'Organization'. This system tries to make the interface as simple as possible and at the same time not risking the security of data stored in. This minimizes the time duration for recruitment process.

2.2 SOFTWARE INTERFACE:

• **Front End Client** –The Applicants and Organization online interface is built using JAVA

The Administrators local interface is built using Java.

• **Web Server** – Wamp server (SQL Corporation).

• **Back End** - SQL database.

2.3SYSTEM FUNCTIONS:

 The applicant views the jobs through Advertisement.

 Applicants apply for the job.

 Test and Interview are conducted.

 Recruited Applicants are informed.

 HR Manager can generate reports from the information and he/she is the only authorized personnel to add the eligible application information to the database.

2.4 HARDWARE INTERFACE:

The server is directly connected to the client systems. The client systems have access to the database in the server.

2.5 USER CHARACTERISTICS:

Applicant:

These are the persons who desire to apply for the job.

Organization:

These are the person with certain privileges to announce recruitment depending upon the organization need. He/ She may contain a group of persons under him/her to publish advertisement and give suggestion whether or not to approve the recruitment.

HR:

He/ She is the person who upon receiving intimation from the RS, perform a personal verification of the applicants and see if he/she has eligibility for the advertised job through a process of Test and Interview.

2.6 CONSTRAINTS:

 The Applicants require a computer to submit their information.

2.7 ASSUMPTIONS AND DEPENDENCIES:

The Applicants and HR must have basic knowledge of computers and English Language.

RESULT:

Thus the mini project for recruitment system has been successfully executed and codes are generated.

EX NO: 8 FOREIGN TRADING SYSTEM

AIM:

To design a project Foreign Trading System using star UML and to implement the software in flask.

PROJECT ANALYSIS AND PROJECT PLANNING:

The initial requirements to develop the project about the mechanism of the Foreign Trading System is collected from the trader. The complete project analysis is developed after the identifying the scope and the project statement is prepared.

PROBLEM STATEMENT:

The steps involved in Foreign Trading System are:

• The forex system begins its process by getting the username and password from the trader.

• After the authorization permitted by the administrator, the trader is allowed to perform the sourcing to know about the commodity details. • After the required commodities are chosen, the trader places the order.

• After the commodities are ready for the trade, the trader pays the amount to the administrator.

• The administrator in turn provides the bill by receiving the amount and updates it in the database.

• The trader logouts after the confirmation message has been received.

SOFTWARE REQUIREMENT SPECIFICATION:

INTRODUCTION:

International trade is exchange of capital, goods, and services across international borders or territories. Foreign trading system is the interface between the exporter and buyer. It aims at improving the efficiency in the production, export process and reduce the complexities involved in it to the maximum possible extent. Increasing international trade is crucial to the continuance of globalization. Without international trade, nations would be limited to the goods and services produced within their own borders.

OBJECTIVE:

The main objective of Foreign Trading System is to make the traders to do trading process easily through online as the forex is open 24 hours a day. Considering the fact that the number of buyer is increasing every year, an Automated System becomes essential to meet the demand.

OVERVIEW:

The overview of the project is to design an online tool for the foreign trading process and it oversees the implementation, administration and operations covered in foreign trade.

PURPOSE:

The primary purpose of the forex is to assist international trade and investment, by allowing businesses to convert one currency to another currency. So this system uses several programming and database techniques to elucidate the work involved in this process. The system has been carefully verified and validated in order to satisfy it.

SCOPE:

The System provides an online interface to the buyer where they can fill in their personal details and submit the necessary documents. The authority concerned with the production and shipment of goods can use this system to reduce his workload and process the application in a speedy manner.Being the market available 24 hours a day,this gives the trader to choose which time they would like to trade.

FUNCTIONALITY:

Transfer purchasing power between countries. Obtain credit for international trade transactions. Minimize exposure to the risks of exchange rate changes.

SUSABILITY:

The interface to make the trader access the system will be efficient.

PERFORMANCE:

The capability that the system performs on the whole will be efficient and reliable without any error occurrence.

RELIABILITY:

The system should be able to maintain its function throughout the transactions in the future.

OVERALL DESCRIPTION:

It will describe major role of the system components and inter-connections.

PRODUCT PERSPECTIVE:

This system tries to make the interface as simple as possible and at the same time not risking the security of data stored in. This minimizes the time.

EXTERNAL INTERFACE REQUIREMENTS:

USER INTERFACE:
Login screen.
Product details screen.

SOFTWARE INTERFACE :
Front End Client - The exporter online interface is built using CSS ,bootstrap and HTML.
Platform-python flask
Back End -MYSQL

3 HARDWARE INTERFACE :
The server is directly connected to the client systems. The client systems have access to the database in the server.

FUNCTIONALITY REQUIREMENTS:
Functional requirements refers to the functionality of the system. The services that are provided to the trader who trades.

OTHER NON FUNCTIONAL REQUIREMENTS:

PERFORMANCE REQUIREMENTS:
The web server should able to support multiple users trying to log in simultaneously.

SAFETY REQUIREMENTS:
The trades details are available in the database and must be updated every time when a product is added.

SECURITY REQUIREMENTS:
The member's certain details from the database should not modify the database.

11	Acer Predator Laptop	Acer	₹ 65000	Poorna chandar	3	₹ 195000	Pending

RESULT:

Thus the above foreign trading system has been designed and implemented successfully.

EX NO: 9 **LIBRARY MANAGEMENT SYSTEM**

AIM:

To develop a library management system using star UML software.

PROBLEM ANALYSIS AND PROJECT DESIGN:

The library management system is the software in which a user can register themselves and then he can borrow book from the library. It mainly concentrates on providing books for engineering students.

PROBLEM STATEMENT:

The process of members registering and borrowing books from the library are described sequentially through following.

- First the user registers her /him if she/he was new to the library.
- They select their corresponding book title and published year.
- After selecting the year they fill the necessary details and select the book and he will be directed towards administrator.
- The administrator will verify the status and issue the book.

SOFTWARE REQUIREMENT SPECIFICATION:

1. INTRODUCTION:

This system would be used by members who are students of any collage and only other members and outside to check the availability of the books and borrow the books and then the database are updated.

2. OBJECTIVE:

The main objective of the system was to design a library system to enable a central monitoring mechanism be more faster and less error prone apart from this.

To help the area to acquire the right books for the syllabus at the right time.

3. OVERVIEW:

The overview of this project is to design a tool for library. So that it can be used by any library to lend their book as well as colleges.

4. GLOSSARY:

TERMS DESCRIPTION
MEMBER

The one who register himself and borrow book from library.

1. DATABASE

    Database is used to store the details of members and books.

2. ADMINISTRATOR

    The one who verifies the availability of book and issue them.

3. USER

    Member

SOFTWARE REQUIREMENT SPECIFICATION:

This software specification documents full set of features and functions library management is according to user’s specification

5. PURPOSE:

The purpose of the library management system is to reduce the manual intervention.

6. SCOPE:

The scope of this library management system is to act as a tool of library administrator for quick reference availability of the books.

7. FUNCTIONALITY:

Many members will be searching to take the book from the library at day to serve all the members.

8. USABILITY:

User interface makes the library system to be efficient. This is the system will help the members to register easily and helps them to get their books easily. The system should be user friendly.

9. PERFORMANCE:

It describes the capability of the system to perform the selecting process of the book without any error and performing it effectively.

SOFTWARE INTERFACE:

Front End Client - java
Back End -MYSQL

10. RELIABLITY:

The library management should be able to serve the application with correct information and day to day update of information.

11. FUNCTIONAL REQUIREMENTS:

Functional requirements are those refer to the functionality of the system. That is the services that are provided to the member who borrows the book.

EX.NO:10 STUDENT INFORMATION SYSTEM

AIM:

To develop a project Student information system using Star UML and to implement the software in python, html and CSS.

PROBLEM STATEMENT:

The Student information system is an application in which a staff can upload attendance and Marks. Candidate can view his personal details and academic details. The registered details can be Verified for any fraudulent or duplication and can be Removed if so. This Database can be used to issue Hall ticket and other necessary materials eligible to students. The Staff is only allowed to Edit, update and delete the records. It is a process of maintaining Details such as Personal, Academic, and Placement Details of the Students

SOFTWARE REQUIREMENT SYSTEM:

1. INTRODUCTION:

Student Information application is an interface between the Student and the authority responsible For the Exams. It aims at improving the efficiency in the Mark registration system of students and reduces the complexities involved in it to the maximum possible extent.

2. OBJECTIVE:

The main objective of Student Information System is to make candidates register and obtain Attendance and marks. Student Information System provides easy interface to all the users to apply for the exam easily.

3. OVERVIEW:

The overview of the project is to design a Student Information tool for the registration process Which makes the work easy for the candidate as well as the authorities of Exam. Authorities of the exam can keep track of and maintain the database of the attendance and mark Update for the exams.

4. GLOSSARY:

TERMS DESCRIPTION:

CANDIDATE OR STUDENT: Candidate can submit form with his name and id.

DATABASE: Database is used to maintain and store attendance and percentage the details of registered candidates.

SOFTWARE REQUIREMENT SPECIFICATION: This software specification documents full set of features and function for online recruitment system that is performed in company website.

5. PURPOSE:

The purpose of Student Information system is to make registration and obtaining marks in an Easier way and to maintain the registered details in an effective manner.

6. SCOPE:

The scope of this Student Information process is to provide an easy interface to the candidates where they can fill their details and the authorities maintain those details in an easy and effective way.

7. FUNCTIONALITY:

The main functionality of registration system is to make the registration and database for it to be maintained in an efficient manner.

Product function:

The SIMS will allow access only to authorized users with specific roles (system administrator, faculty and student).

System administrator will be able to add, modify or delete information.

8. USABILITY:

User interface makes the Student Information system to be efficient. That is the system will help the instructors to register easily and helps the authorities to maintain details effectively. The system Should be user friendly.

9. PERFORMANCE:

It describes the capability of the system to perform the registration process of the instructor and Retrieval by candidate without any error and performing it efficiently.

10. RELIABILITY:

The Student Information system should be able to serve the candidate with correct information and day-to-day update of information.

11. FUNCTIONAL REQUIREMENTS:

Functional requirements are those refer to the functionality of the system that is the services that Are provided to the candidate who apply for the exam.

12. INTERFACE REQUIRENMENT:

SOFTWARE REQUIRENMENT:

1. OPERATING SYSTEM: Windows 7, windows 8.
2. FRONT END: HTML, CSS
3. BACK END TOOL: PyCharm IDE

4: BACKEND: Python (flask)
